REDUCING THE RISKS AND THE WORRY

SITE CLEARANCE & WASTE REMOVAL

Vacant sites and land accumulate waste at alarming speeds. This often includes hazardous waste materials which necessitates the correct waste management procedures and equipment for effective removal. Responsible companies like Secure Site will also ensure hazardous waste disposal is carried out in an approved and certified manner.

Total Site Clearance

We offer comprehensive clearance services as practical and affordable alternatives to skip hire or other routes when managing clearances, disposal and decontamination of your site. Our highly trained teams clear anything from a vacant flats or offices to empty pubs and warehouses or entire industrial estates, removing waste, abandoned stock, machinery, signage, fixtures and fittings, in order to reduce potential hazards and help market the site properly.

Hazardous Waste Disposal

Our specialist clearance teams are also equipped and trained in hazardous waste disposal, focusing on the safe removal and disposal of hazardous chemical waste such as pesticides, laboratory chemicals, industrial chemicals, spillages, tank cleaning and related contaminated materials. As Environment Agency licensed waste carriers we select the most appropriate disposal route for your waste – landfill, incineration, treatment or recovery – ensuring all documentation and licensing is in place to meet all regulatory, legislative and insurance requirements.

Human Waste Removal & Site Disinfection

An abandoned or vacant site or building can prove a draw for vagrants and other trespassers who may occupy the site or premises for only a few nights at a time. Aside from the trespass implications of illegal occupation, site and building owners often face the problem of dealing with human waste and detritus that has been left even after a brief occupation. Apart from being unsightly, human waste is also a health risk and can include associated rubbish such as pet corpses and urine soaked clothing. As a licensed waste carrier, we dispose of human waste in accordance with current environmental legislation in a speedy, efficient and hygienic manner.

Drug Needle & Bio-Hazard Removal

Vacant sites and properties are also at risk of being frequented by illegal drug users who will leave needles, syringes and all kinds of other bio hazardous waste materials in their wake. Discarded needles and syringes can be a danger to everyone. These items all present a very real health hazard. Blood borne pathogens such as HIV and Hepatitis are highly infectious and contact with them can have very serious, sometimes life threatening, consequences. We can carry out sweeps of known and potentially suspect properties, removing needles and sharps waste safely and disposing of that waste legally. Our teams can also disinfect affected areas after the safe removal of drug use equipment, leaving it clear of contamination and risks.

Asbestos Removal

Asbestos removal should only be carried out by highly trained operators, especially if you're working on buildings erected between 1950 and mid-1980's - and only after a detailed risk assessment of the site! According to the Health & Safety Executive, asbestos is the greatest single cause of work related deaths in the UK. SecureSiteUK and its partners have a wealth of knowledge and experience in asbestos removal and disposal. Ask us for advice first.

Green Waste Removal

If a site has been abandoned or left empty for several months, it's likely that existing hedges, trees or other vegetation may be getting out of control. Apart from the physical inconvenience, green waste accumulating on your site can also be a possible health concern, providing a breeding ground for rats and other vermin. In addition, an overgrown site looks neglected, restricts viewings and is detrimental to effective marketing for re-letting or sale.

The Things We Love Removing
