REDUCING THE RISKS AND THE WORRY

PHYSICAL SECURITY FOR BUILDINGS & SITES

Unfortunately, vacant properties and land are seen as easy targets by squatters, thieves, trespassers and fly-tippers, presenting a very real threat to your investment and incurring considerable time and expense to rectify. As prevention is far less expensive, time-consuming or stressful than cure, we provide a wide and integrated range physical security measures to protect buildings and sites from the start.

Steel Screens Keep Properties Secure

We don't board in wood – just galvanised steel sheeting, fixed with our specialist security screws which means that once they're on – they stay on – until you ask us to take them off!. As well as being harder to remove, steel provides far greater security than traditional wood boarding, which can degrade or warp and provide arsonists with ready-made combustible material on site! Ask about our perforated sheet sheets to allow ventilation as well as light into properties for inspections and viewings, our solid steel shutters that encase entire window frames, or solid steel security doors with 5-lever mortise locks.

Concrete Barriers Keep Trespassers & Fly-Tippers Out

Our 2.5 tonne, 3 metre wide concrete barriers interlock to provide highly visible and impenetrable perimeter security protection of exposed sites or the strategic blocking of entrances to vulnerable land. As we deliver throughout the UK within 24-hours, these concrete barriers could be providing your site with an effective - and very visual - physical blockade to unwanted vehicle trespass or fly-tippers in a matter of hours.

Security Fencing Keeps Equipment In & Thieves Out

Available in heights upto 3,6 metres and in any colour, galvanised Palisade fencing and gates can be erected in a matter of days to provide a permanent and very effective anti-climb barrier to perimeters and vulnerable sites. Finished with tri-point or rounded pails, pedestrian or vehicular gates can also be incorporated to suit any site and requirements.

Emergency Fencing – When You Need It

Carrying most common fence sizes in stock means we can react to emergencies quickly, often installing a fencing system next-day. We also provide a full fencing installation and repair service.

Often used in conjunction with concrete barriers for an immediate defence on construction sites, dangerous areas or open land, temporary fencing or hoarding systems are very effective at keeping people out and equipment in.

Communal Doors Keep Residents Safe

For occupied buildings that require a secure entrance for residents, steel communal doors provide an attractive and robust entrance and are proven to reduce vandalism and crime. Designed to Police specifications and tailored to your requirements and colours, they fully integrate with your existing security systems, giving residents and visitors complete peace of mind.

Our Physical Security

- ✓ Is often available the same day
- ✓ Is available nationwide
- ✓ Is installed by our experienced in-house teams
- ✓ Is effective
- ✓ Is integrated
- ✓ Is all available following one phone call
- ✓ Saves you time, money and hassle
